### **PRESS RELEASE**

FOR IMMEDIATE RELEASE

## **Renewable Energy and Power, Inc. Hurricane Harvey Disaster Relief**

### **Missouri City Operations Center Applying To Be FEMA Approved Supplier**

Renewable Energy and Power, Inc. (OTC: RBNW), a diversified corporation with markets in energy-saving technologies of LED lighting, solar and wind energy, is assisting the Hurricane Harvey disaster relief efforts in Texas by offering discounted LED products through the company's LED LITES USA Operation Center located in Missouri City, Texas.

“With the incredible damage caused by Hurricane Harvey that we see on television and through social media, it was instantly apparent that LED LITES USA had to be part of the recovery efforts,” said company CEO Donald MacIntyre. “Discounting our LED products to those within the disaster area is our initial step. Our operations center in Missouri City, just southwest of Houston, was fortunate enough to have come through intact. The personnel of our office will be traveling throughout the disaster area, and as other assistance and products needed become apparent, we’ll be doing more.”

All inventory will be discounted 15% immediately for those within the disaster area. Homeowners restoring their lighting needs will find a full range of products at the discounted pricing. For area lighting, it's expected that immediate requirements include LED Solar Area Lighting which by-passes the need to wait for conduit repairs or rewiring. Additionally, LED Ceiling Panels and Tube Lights for commercial and retail store use will assist in restoring the economy. The company's experience in retrofitting will allow replacements to be brought online quickly and conveniently.

The Area Manager for LED LITES USA Missouri City Operations Center is Ms. Christina Bates, available at 501-209-0497.

Renewable Energy and Power, Inc.'s website, [www.reappower.com](http://www.reappower.com), illustrates the important services and products Renewable Energy and Power, Inc. (REAP) provides to the Green Energy market to make it competitive with fossil fuels by employing proprietary new technologies in combination with existing solar and wind-power electric generation and LED lighting. REAP functions in both domestic and international markets that are in vigorous growth stages with long-term prospects. Federal and state legislation in the United States, including many tax incentives, are driving businesses and consumers to replace older technologies with the new solar and LED alternatives offered by REAP.
